PILLAR 3 DISCLOSURES OF BASEL III AS ON 31.12.2025

DF –2: CAPITAL ADEQUACY

Qualitative Disclosures:

(a) A summary discussion of the Bank's approach to assessing the adequacy of its capital to support current and future activities

Bank has a process for assessing its overall capital adequacy in relation to Bank's risk profile and a strategy for maintaining its capital levels. The Process provides an assurance that Bank has adequate capital to support all risks inherent to its business. Bank actively manages its capital to meet regulatory norms by considering available options of raising capital.

The Bank has put in place a framework on Internal Capital Adequacy Assessment Process (ICAAP) in consideration of the relevant risk factors of the bank as a measure towards adequacy of capital available to meet the residual risk as part of Pillar 2 requirements. In addition to the credit risk, market risk and operational risk prescribed under Pillar 1, the bank has analyzed its portfolio and assessed different material risks under Pillar 2 that are either partially covered or not covered under Pillar 1. The ICAAP details the capital planning process and carries out an assessment covering measurement, monitoring, internal controls, reporting, capital requirement and stress testing of the following Risks:

- Rating Migration Risk/ Default Risk
- Liquidity Risk
- Reputational Risk
- Strategic Risk
- Residual Collateral Risk
- Pension Obligation Risk
- Legal Risk
- Country Risk
- Key personnel Risk
- Concentration Risk
- Interest Rate Risk
- Model Risk
- Compliance Risk
- Business Risk
- Technology Risk
- Outsourcing Risk
- Settlement Risk
- Conduct Risk

In terms of ICAAP, Bank has put in place appropriate mechanism to assess all the Material Risks.

The bank has formulated a "Stress Testing framework" to assess the potential vulnerability of the organization to exceptional but plausible events in line with the guidelines issued by RBI on 2nd December 2013. In addition to this bank has also formulated "Stress Testing Framework" based on EASE guidelines. Stress testing and scenario analysis, particularly in respect of the bank's material risk exposure, enable identification of potential risks inherent in a portfolio at times of economic recession/downturn and accordingly suitable proactive steps are taken to address the same. In accordance with the policy prescriptions, the bank carries out various stress tests on bank's balance sheet periodically and specific portfolios and places the reports to appropriate committees.

Quantitative Disclosures

Capital Requirement

Bank's capital requirements have been computed using Standardized Approach for Credit Risk, Standardized Duration Method for Market Risk and Basic Indicator Approach for Operational Risk.

As on Dec 31, 2025, the Capital held by the bank is at 16.30 % of the Total Risk Weighted Assets against the regulatory requirement of 11.50% including CCB:

Rs in Crores

	As on 31.12.2025
(b) Capital requirements for Credit Risk	
• Portfolio subject to Standardized Approach	15964.39
• Securitisation Exposures	0.00
(c) Capital requirements for Market Risk	
• Standardised Duration Approach	
- Interest Rate Risk	56.33
- Foreign Exchange Risk (including Gold)	19.72
- Equity Risk	145.79
c) Capital requirements for Operational Risk	
• Basic Indicator Approach	1807.00
d)Common Equity Tier1, Tier 1 & Total Capital Ratio	
• Common Equity Tier-I Capital Ratio	13.99%
• Tier 1 Capital Ratio (Tier 1 CRAR)	13.99%
• Total Capital Ratio (CRAR)	16.30%

DF-3: CREDIT RISK: GENERAL DISCLOSURES

a. Qualitative Disclosures

- **Definitions of past due and impaired assets (for accounting purposes)**

Non-performing assets

An asset becomes non-performing when it ceases to generate income for the Bank. A non-performing Asset (NPA) is an advance were

(i) Interest and/or instalment of principal remain 'overdue' for a period of more than 90 days in respect of a Term Loan.

(ii) The account remains 'out of order' for a period of more than 90 days, in respect of an Overdraft/Cash Credit (OD/CC).

(iii) The bill remains 'overdue' for a period of more than 90 days in the case of bills purchased and discounted.

(iv) Any amount to be received remains 'overdue' for a period of more than 90 days in respect of other accounts.

(v) A loan granted for short duration crops is treated as NPA, if the instalment of principal or interest thereon remains overdue for two crop seasons and a loan granted for long duration crops is treated as NPA, if instalment of principal or interest thereon remains overdue for one crop season.

(vi) An account would be classified as NPA only if the interest charged during any quarter is not serviced fully within 90 days from the end of the quarter.

(vii) The amount of a liquidity facility remains outstanding for more than 90 days, in respect of securitization transactions undertaken in accordance with the RBI guidelines on securitization dated February 1, 2006.

(viii) In respect of derivative transactions, the overdue receivables representing the positive mark to market value of a derivative contract, remain unpaid for a period of 90 days from the specified due date for payment.

'Out of Order' status

An account is treated as 'out of order' if the outstanding balance remains continuously in excess of the sanctioned limit/drawing power.

In cases where the outstanding balance in the principal operating account is less than the sanctioned limit/drawing power, but there are no credits continuously for 90 days as on the date of Bank's Balance Sheet, or where credits are not enough to cover the interest debited during the same period, such accounts are treated as 'out of order'.

'Overdue'

Any amount due to the Bank under any credit facility is 'overdue' if it is not paid on the due date fixed by the Bank.

- **Resolution of Stressed Assets**

Early identification and reporting of stress:

Identification of incipient stress in loan accounts, immediately on default*, by classifying stressed assets as special mention accounts (SMA) as per the following categories:

SMA Sub-categories	Basis for classification – Principal or interest payment or any other amount wholly or partly overdue between
SMA-0	1-30 days
SMA-1	31-60 days
SMA-2	61-90 days

* Default' means non-payment of debt when whole or any part or instalment of the amount of debt has become due and payable and is not repaid by the debtor or the corporate debtor. For revolving facilities like cash credit, default would also mean, without prejudice to the above, the outstanding balance remaining continuously in excess of the sanctioned limit or drawing power, whichever is lower, for more than 30 days.

- **Discussion of the Bank's Credit Risk Management Policy**

Organizational Structure for Credit Risk Management

The bank has put in place a well-structured loan policy and credit risk management policy duly approved by Board. The policy document defines organizational structure, role and responsibilities and processes whereby the Credit Risk carried by the Bank can be identified, quantified and managed within the framework that the Bank considers consistent with its mandate and risk tolerance. The Board has formed committees to oversee risk management processes, procedures and systems. Risk Management Committee of the Board (RMCB), a sub-committee of the board, is constituted which is responsible for management of Credit Risk. Credit risk is monitored by the bank on a bank-wide basis and compliance with the risk limits approved by Board / RMCB is ensured.

Policy & Strategy

The bank has taken earnest steps to put in place best credit risk management practices in the bank. In addition to Loan Policy and Credit Risk Management Policy, the bank has also framed Interest Rate Policy on Advances, Funds and Investment Policy, Counter Party Risk Management Policy and Country Risk

Management Policy, etc., which forms integral part of monitoring of credit risk in the bank. Besides, the bank has implemented a policy on collateral management and credit risk mitigation which lays down the details of securities (both prime and collateral) normally accepted by the Bank and administration of such securities to protect the interest of the bank.

Credit Risk Management encompasses identification, assessment, measurement, monitoring and control of the credit risk in exposures.
In the processes of identification and assessment of Credit Risk, the following functions are undertaken:

(i) Developing and refining the Credit Risk Assessment (CRA) Models/Scoring Models to assess the Counterparty Risk, by taking into account the various risks categorized broadly into Financial, Business, Industrial and Management Risks, each of which is scored separately.

(ii) Conducting industry research to give specific policy prescriptions and setting quantitative exposure parameters for handling portfolio in large / important industries, by issuing advisories on the general outlook for the Industries / Sectors, from time to time.

(iii) Risk Analysis of the all the high values credit proposals are being carried out by Risk Management Department before placing it to Credit Sanctioning Committee.

The monitoring and control of Credit Risk includes setting up exposure limits to achieve a well-diversified portfolio across dimensions such as single borrower, group borrower and industries. For better risk management and avoidance of concentration of Credit Risks, internal guidelines on prudential exposure norms in respect of individual companies, group companies, Banks, individual borrowers, non-corporate entities, sensitive sectors such as capital market, real estate, sensitive commodities, etc., are in place. Credit Risk Stress Tests are conducted at Quarterly interval to identify vulnerable areas for initiating corrective action, where necessary.

Credit Rating and Appraisal Process:
The Bank manages its credit risk through continuous measuring and monitoring of risks at obligor (borrower) and portfolio level. The Bank has a robust internal credit rating framework and well-established standardized credit appraisal / approval process. Credit rating is a facilitating process that enables the bank to assess the

inherent merits and demerits of a proposal. It is a decision enabling tool that helps the bank to take a view on acceptability or otherwise of any credit proposal.

The rating models factor quantitative and qualitative attributes relating to Risk components such as Industry Risk, Business Risk, Management Risk, Financial Risk, Project risk (where applicable) and Facility Risk etc. The data on industry risk is regularly updated and supported by CRISIL, based on market conditions.

Sanctioning Powers:
The bank follows a well-defined multi layered discretionary power structure for sanction of loans and advances. Credit sanctioning at regional office and Central Office are happening through various committees. Specific Sanctioning Powers have been delegated to Branch Managers. RLPCs have been created for sanctioning of Retail Loans.

Checks and balances viz. separation of credit risk management from credit sanctions, system of assigning credit risk rating, validation of ratings, mechanism to price credit facilities depending on risk rating of customer, credit audit etc. are in place. Minimum entry level rating benchmarks are stipulated. A suitable mechanism is in place to monitor aggregate exposure on other banks and country exposures.

DF-4: CREDIT RISK: DISCLOSURES FOR PORTFOLIOS SUBJECT TO THE STANDARDISED APPROACH

Qualitative Disclosure

(a) For Portfolios subject to Standardised Approach

- **Names of Credit Rating Agencies used, plus reasons for any changes**

As per RBI Guidelines, the Bank has identified CARE, CRISIL, ICRA, India Rating, ACUITE Ratings and Research and INFOMERICS, BRICKWORKS (Domestic Credit Rating Agencies) and FITCH, Moody's and S&P (International Rating Agencies) as approved Rating Agencies, for the purpose of rating Domestic and Overseas Exposures respectively, whose ratings are used for the purpose of computing Risk-weighted Assets and Capital Charge.

- **Types of exposures for which each Agency is used**

(i) For Exposures with a contractual maturity of less than or equal to one year (except Cash Credit, Overdraft and other Revolving Credits), Short-term Ratings given by approved Rating Agencies are used.

(ii) For Cash Credit, Overdraft and other Revolving Credits (irrespective of the period) and for Term Loan exposures of over 1 year, Long Term Ratings are used.

- **Description of the process used to transfer Public Issue Ratings onto comparable assets in the Banking Book**

The key aspects of the Bank's external ratings application framework are as follows:

- All long term and short-term ratings assigned by the credit rating agencies specifically to the Bank's long term and short-term exposures respectively are considered by the Bank as issue specific ratings.
- Foreign sovereign and foreign bank exposures are risk-weighted based on issuer ratings assigned to them.
- The Bank ensures that the external rating of the facility/borrower has been reviewed at least once by the ECAI during the previous 15 months and is in force on the date of its application.
- Bank facility rating with the disclosure by the CRAs on the name of the bank and the corresponding credit facilities rated in the Press Releases (PR) issued on rating actions by the said CRA are only considered for Risk Weight purpose.

- Where multiple issuer ratings are assigned to an entity by various credit rating agencies, the risk weight is determined as follows:

  - If there is only one rating by a chosen credit rating agency for a particular claim, then that rating is used to determine the risk weight of the claim.
  - If there are two ratings accorded by chosen credit rating agencies, which map into different risk weights, the higher risk weight is applied.
  - If there are three or more ratings accorded by chosen credit rating agencies with different risk weights, the ratings corresponding to the two lowest risk weights are referred to and the higher of those two risk weights is applied, i.e., the second lowest risk weight.
